PAX IMAGINE

MODULAR MRO CONCEPTS

Built for today's task.
Reconfigurable for tomorrow's.

PAX IMAGINE concepts powered by ModTruss use modular, bolted construction. Shelf positions, work areas, and storage arrangements can be reconfigured within the system's connection pattern to accommodate changing operations.

01 Raise, lower, relocate, or remove shelves.

02 Reconfigure work surfaces, storage, and accessories.

03 Reuse components as their needs change.

04 Combine or expand configurations using compatible components and connections.

Explore a configuration for your operation.

Why ModTruss vs. Others?

One of the strongest advantages I see in ModTruss is its potential to support generations of changing operational needs. Rather than being limited to one task or layout, the system can be reconfigured and repurposed as your operation evolves.

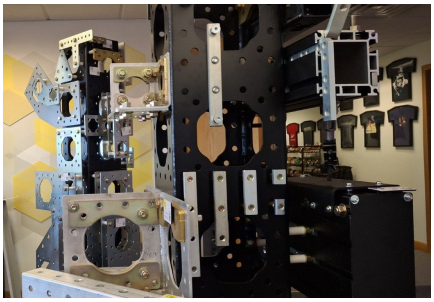

Price is important, but the value goes beyond the initial purchase. The ability to reuse the same components for different applications—rather than replace equipment each time your needs change—is where I see its greatest long-term cost advantage.

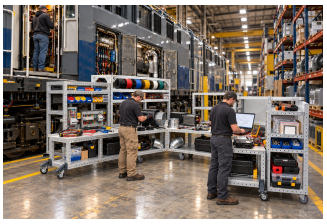

ModTruss has built an impressive client base around its larger TR6 and TR12 systems, which have been the foundation of the company. My interest in expanding the manufacturing applications for TR2 and TR3 began after seeing how extensively ModTruss used its own products throughout its production and warehouse areas. It made perfect sense, and the brainstorming began.

I brought those possibilities to the President and CEO of ModTruss Inc. Patrick Santini, who is also the company's founder and the inventor of the ModTruss product line.

Particularly for manufacturing intralogistics: organizing, staging, and moving materials within a facility, those observations inspired the conceptual ideas I shared with you.

I would welcome the opportunity to explore how these concepts could address specific needs in your operation—whether through ModTruss or another practical solution.

YOUR NOTES

Padded panel bays, coiled harness storage and labeled parts bins support assembly kitting. Final supplied components and accessories are defined in the project quote.

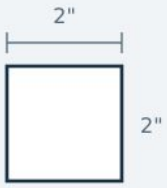

Application concept. Final configuration, connections, dimensions and capacity require project-specific review. Tools, bins, equipment and other accessories are customer-supplied unless included in the quote.

Choose a frame around the task

Nominal member families; final selection is project-specific.

TR2

2" × 2" member

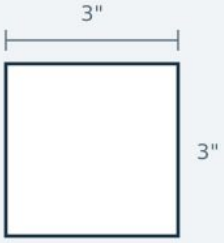

Compact member option

Potential shelf or intermediate-support use.

TR3

3" × 3" member

Larger member option

Primary framing or other application-specific use.

HYBRID

TR3 + selected TR2 supports

Combine where appropriate

TR3 main frame with selected TR2 intermediate supports.

Nominal section sizes shown at the same scale. Hybrid diagram illustrates member placement only.

Final member sizes, spans, connections and loading require application review. Tools, equipment and accessories are customer-supplied unless
